## INTRODUCTION

The following report includes the detailed results for each question of the 2013 Durham YRBS Survey. The following tables display the responses for each question as well as responses by sex, and race/ethnicity. Race/ethnicity status was constructed based on the results of Question 4 and Question 5, Hispanic ethnicity and race respectively. If a student claimed Hispanic ethnicity, they were categorized as Hispanic, otherwise students were categorized based on their race. Race was categorized as White, Black and Other. Significant findings by race/ethnicity and sex were determined using Chi-squared p-values as shown. There were a total of 305 students who responded to the survey, 298 who cumulative responded to race/ethnicity questions and 299 who responded to sex. Highlighted section details can be found in the public report.
